

## Corporate Overview

*Salumatics has the resources, knowledge, experience, and tools to help our clients achieve their health information management goals*

Salumatics® provides trusted information management services to healthcare organizations. We have helped clients in Canada and the United States meet their health information management requirements since 2000.

Salumatics provides flexible, secure and innovative solutions, tailored to meet the needs of our clients. We offer an integrated portfolio of services and technologies to support risk mitigation, document conversion, indexing, electronic document management, health record coding, and data quality audits.

With over ten years experience using ICD-10, our health record coding team provides both short term and long term solutions to hospital clients.

We understand the challenges of integrating paper and digital information, and help our clients address those challenges. Our team includes experienced health care managers, health information management professionals, business managers, strategic planners and privacy experts.

Since our inception, we have committed to a rigorous standard of privacy, security and confidentiality compliance. Our facilities and data centres are secure, and our staff is trained to safeguard the personal health records, human resource files, and organizational financial data in our care.

### HELPING CLIENTS ACHIEVE THEIR GOALS

We know that our clients have multiple, often competing information management goals that are imposed by economic pressures and compounded by growing statutory and regulatory demands:

- information integration
- storage of increasing amounts of data
- timely access
- cost containment
- departmental productivity
- floor space reduction
- privacy and security

Salumatics has the resources, knowledge, experience, and tools to help our clients achieve their health information management goals.

### MANAGING SENSITIVE INFORMATION

We understand the value and use of confidential information. Salumatics business services include:

- records scanning and document conversion
- coding & abstracting, for backlog and day forward
- transcription & dictation, for backlog and day forward
- long term records management and retrieval
- data hosting & business continuity.

Salumatics' flagship product SaluVision® provides seamless access to images of client records. SaluVision is a web-based Software-as-a-Service (SaaS) electronic document management solution (EDMS) that allows users to search, sort, view and print images of documents that have been scanned from paper or downloaded from an imaging system.

Salumatics operates a Tier II data centre offering data hosting, backup & recovery, and access to SaluVision, our EDMS application. The Salumatics data centre provides multiple concurrent client users with secure and instant access to their data. Secured virtual private networks (VPN) are maintained between Salumatics' data centres, our clients' data centres and our remote coding specialists.

Salumatics also offers supportive hardware technologies through key partnerships. These technologies assist organizations in healthcare and other industries with their end-to-end information management needs, from scanners to convert paper records, to kiosks that capture patient information, to enterprise storage hardware for the long-term retention of scanned data and digital images.

With secure facilities and representation across North America, Salumatics is uniquely positioned to deliver innovative solutions to our clients.
